

Make collaboration your competitive advantage

Today's workers access multiple applications to complete their work. Often, companies introduce these tools without an overarching strategy and with minimal training for employees. How do you facilitate collaboration when your workforce contributes from home or from the road, cyberattacks are on the rise, and business continuity threats loom?

DXC Technology's Modern Workplace can help you:

Work, connect and collaborate with the right tools

54% of companies point to poor technology and infrastructure as the biggest barriers to effective remote working¹

10% experience productivity improvements using collaboration platforms²

5x increase in Microsoft Teams usage during recent global health crisis

Problem

Disconnected applications with overlapping capability sets actually reduce efficiency instead of delivering the desired outcomes.

Solution

The employee experience is central to everything we do to support our customers. By building on the capabilities of the native Microsoft software, DXC collects key experience and operational metrics and in turn provides a next-level, personalized experience that results in clear choice and improved efficiency.

Empower employees and increase productivity

Problem

Employees are sinking valuable time into redundant, manual tasks when their energy is better spent on creative, innovative projects.

50% — the amount of time spent on frustrating, repetitive tasks³

69% — the amount of managerial work that will be automated by 2024, providing more time for strategic planning and talent management⁴

Solution

Modern Workplace leverages Microsoft automation, analytics and AI to spot transformative business opportunities. At the same time, DXC can modernize your business processes by migrating them into a common Microsoft Teams platform with Microsoft Power Platform and Dynamics 365.

Work from any place or device in a secure environment

30% — the number of companies that are prepared to deliver a fully secure and connected workforce that can collaborate anytime, anywhere⁵

90% — the number of HR leads who plan to make remote work a long-term strategy, requiring a long-term plan for secure, distributed work⁶

Solution

Modern Workplace offers a secure work environment — all without impacting employee productivity. We do this by leveraging Microsoft's software security solutions including Microsoft Defender, Azure Sentinel and Microsoft 365 with its Cloud App Security Broker.

Equip your workforce for the future of business

Modernization plays a vital role in business resilience. Learn how your company can take steps to provide a personalized, intelligent, secure and modern workplace with DXC and Microsoft.
