DXC

EFFICIENTLY DIGITIZE DOCUMENTS WITH DXC WEBSCAN®

Numerous reference projects and many years of experience

Optional BSI Certification for Replacement Scanning

Benefit from our many years of experience

A central concern of the public administration is the feasibility of electronic administrative procedures without media discontinuity. Among other things, this requires the conversion of the paper originals into digital formats - a powerful scanning service is therefore indispensable.

With DXC WebScan®, we provide a fast, reliable and cost-effective tool that allows the creation of needs-based digital documents. The slim, task-centric web client with a scalable back-end server increases work efficiency while reducing operational costs.

DXC WebScan® is already in use by a wide range of federal, state, and local government agencies. Continuous further development based on specific customer needs makes our solution a mature standard product that presents itself as individually as the customer's requirements in use.

CORE PORTFOLIO PRODUCT
DXC WEBSCAN® FOR
REPLACEMENT SCANNING

DXC WebScan® delivers a targeted, consistent digitization process to not only scan documents, but to prepare them according to their needs. For example, DXC WebScan® can be used to check the scan immediately. At the same time, automatic metadata extraction as well as quality-assured keywording reduce manual intervention and increase the quality of the results.

Thanks to encrypted storage and secure transmission, even confidential documents can be processed. Furthermore, the optional certification of the German Federal Office for Information Security (BSI) in accordance with the RESISCAN Technical Guideline certifies the use of DXC WebScan® for replacement scanning.

The underlying workflow of our solution is constantly adapted to customer needs and further developed based on growing experience. Aligned with the requirements and feedback of our customers, a solution is thus offered that concentrates on the essentials: supporting the work of the users in the best possible way.
