DXC TECHNOLOGY CARBON REDUCTION PLAN

FY26

Supplier name: GBC5 ES Info Sec UK Ltd

Publication Date: 15/09/2026

CARBON REDUCTION PLAN

COMMITMENT TO ACHIEVING NET ZERO

GBC5 ES Info Sec UK Ltd is committed to achieving Net Zero emissions by 2050.

BASELINE EMISSIONS FOOTPRINT

Baseline emissions represent the greenhouse gas (GHG) emissions generated during the selected baseline year (FY19), prior to the implementation of significant emissions reduction initiatives, and provides the reference point against which future emissions reductions are measured.

Our FY19 baseline did not originally include all PPN 006 required Scope 3 categories due to carbon accounting data limitations. Improvements in data collection and calculation methodologies from FY23 onwards enabled all relevant Scope 3 categories to be reported. To ensure consistency and enable meaningful year-on-year comparisons, the FY19 baseline has been retrospectively updated. The estimation approaches are shared in the addendums further below.

BASELINE YEAR FY19 (APRIL 2018 – MARCH 2019)

EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	116
Scope 2 (Location-based)	-
Scope 2 (Market-based)	-
Scope 3 (All Categories)	2,934
Scope 3 (PPN 006 Categories 4,5,6,7,9)	658
Total Market-based Emissions (All S3 Categories)	3,050
Total Market-based Emissions (PPN 006 Subset Categories)	774

CURRENT EMISSIONS REPORTING

REPORTING YEAR FY26 (APRIL 2025 – MARCH 2026)

EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	-
Scope 2 (Location-based)	-
Scope 2 (Market-based)	-
Scope 3 (All Categories)	3,693
Scope 3 (PPN 006 Categories 4,5,6,7,9)	155
Total Market-based Emissions (All S3 Categories)	3,693
Total Market-based Emissions (PPN 006 Subset Categories)	155

EMISSIONS REDUCTION TARGETS

To support progress towards Net Zero, DXC Technology has adopted an SBTi approved near-term target to reduce GHG emissions by 65% by FY30. GBC5 ES Info Sec UK Ltd contributes to this target and projects that emissions across Scope 1, Scope 2 (market-based) and the PPN 006 reporting categories will reduce by 83% by 2030 against the baseline, as shown in the graph opposite.

CARBON EMISSION ACTUALS AND FORECAST (tCO₂e)

Includes Scope 1, 2 and PPN 006 S3 Categories

Forecast assumptions include:

- No new physical sites are introduced to the reporting entity
- No new fleet vehicles are introduced to the reporting entity
- Business travel decreases **15% by FY30; 50% by FY40 and 75% by FY50** as new technologies to decarbonise become available
- ECRW decreases by **15% by FY30; 50% by FY40; and 75% by FY50** as electrical grids and transport use more renewable energies

CARBON REDUCTION PROJECTS

Various environmental management initiatives have been completed or implemented since the FY19 baseline. The cumulative carbon emission reduction (using Market-based Scope 2 figures and PPN 006 Scope 3 categories) achieved by these initiatives equates to 619 tCO₂e, an 80% reduction against the FY19 baseline.

Note that there are no locations associated with GBC5 ES Info Sec UK Ltd, which is fully operated by employees working remotely. This limits the scope of reduction activities.

Emissions reduction initiatives (FY19 baseline – FY26) include:

- Adopting a smart working (hybrid) approach to encourage flexible working for employees and cutting commuting emissions
- Reduced business travel and use of fleet vehicles, with electrification of residual fleet

In the future we plan to implement and continue further measures such as:

- Continued use of our smart working (hybrid) business model to reduce employee commuting and business travel
- Engagement with key suppliers to address emissions within the value chain

DECLARATION AND SIGN OFF

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standard¹ for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans² and the GHG Reporting Protocol corporate standard and uses the appropriate Government emission conversion factors for greenhouse gas company reporting .

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard³.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:

DEREK ALLISON
General Manager, UKI

Notes:

- Global and UK Scope 1 and 2 emissions have been decreasing annually as a result of office and data center reductions as we rationalize our facility footprint to the needs of the business.
- In FY26, UK Scope 1 fugitive emissions decreased due to facility closures and timing of deliveries. Emissions related to all other fuels decreased.
- In FY24, UK's renewable electricity contract lapsed for 4 months, resulting in an increase in Scope 2 market-based emissions from FY23.
- In FY25 and first half FY26, UK's electricity was sourced from sustainable biomass before moving to 100% renewable sources in second half FY26.
- Prior to FY23, PGS was not available by country or legal entity. UK data for FY19 - FY22 has been apportioned based on the UK's FY23, FY24 and FY25 percentage of DXC Global PGS, which was 10% in all years.
- Prior to FY23, CG was not available by country or legal entity. UK data for FY19 - FY22 has been apportioned based on the UK's average FY23, FY24 and FY25 percentage of DXC Global CG, which ranged from 20% to 32% and averaged 25%.
- Prior to FY23, FERA was not available by country or legal entity. UK data for FY19 - FY22 has been apportioned based on the UK's average FY23, FY24 and FY25 percentage of DXC Global FERA, which ranged from 8% to 11% and averaged 9%.
- Prior to FY24, Global UTD emissions were consolidated with PGS and CG. Global UTD emissions have been estimated based on the DXC Global FY24 and FY25 proportion of UTD to the sum of PGS and CG emissions, with was 27% in both years.
- Prior to FY24, UTD emissions were not available by country or legal entity. UK UTD emissions have been estimated based on the proportion of UK UTD to Global UTD emissions in FY24 and FY25, which averaged 31%.
- Following FY24 assurance, an error was found in the calculation of Global Upstream Transportation and Distribution emissions. The change in emissions is immaterial in terms of DXC's full GHG inventory and has been corrected in this disclosure.
- Prior to FY23, waste data was not available by country or legal entity. UK data from FY19 - FY22 has been apportioned based on the UK's average FY23, FY24 and FY25 percentage of Global waste, which ranged from 7% to 24% and averaged 17%.
- Prior to FY22, Bus Trvl data was not available by country or legal entity. UK data from FY19 - FY21 has been apportioned based on the UK's average percentage of Bus Trvl from FY22 to FY25, which ranged from 9% to 12% and averaged 11%.
- Prior to FY22, ECRW was not available by country or legal entity. UK data from FY19 - FY21 has been apportioned based on the UK's average percentage of ECRW from FY22 to FY25, which ranged from 5% to 8% and averaged 6%.
- Prior to FY23, ULA was not available by country or legal entity. UK data from FY19 - FY22 has been apportioned based on the UK's average FY23, FY24 and FY25 percentage of Global ULA, which ranged from 14% to 1% and averaged 6%.
- Prior to FY24, DLA was not relevant for DXC. DLA consists of owned sites which are fully subleased. In FY24, a site in the UK was fully sublet and subsequently sold.

In FY26, a very large UK site was sublet.

TOTAL MARKET EMISSIONS		496,839	368,158	197,969	157,519	150,012	119,769	3,050	2,177	360	305	3,146	3,693	
TOTAL MARKET EMISSIONS INCLUDED IN PPN 006		200,293	136,746	79,196	42,717	33,949	10,522	774	368	267	197	183	155	

1. FY19 scope 1 baseline emissions are comprised of fleet vehicle activity.

2. There are no facility related emissions associated with this entity.

3. Prior to FY23, PGS was not available by country or legal entity. UK data for FY19 - FY22 has been apportioned based on the UK's FY23, FY24 and FY25 percentage of DXC Global PGS, which was 10% in all years. Legal entity data has been apportioned based on the entity's FY23, FY24 and FY25 percentage of UK PGS, which averages 2% over these years.

4. CG emissions have not been identified with this entity.

5. FERA emissions have not been identified with this entity since FY19. FY19 FERA emissions are estimated based on other entity emissions factors.

6. Prior to FY24, UTD emissions were not available by country or legal entity. UK UTD emissions have been estimated based on the proportion of UK UTD to Global UTD emissions in FY24 and FY25, which averaged 31%. Legal entity emissions have been estimated based on the entity's FY24 and FY25 percentage of UK UTD, which averages less than 0.0001% over these years.

7. There are no waste related emissions associated with this entity.

8. Prior to FY23, business travel data was not available by legal entity. UK data from FY19 - FY22 has been apportioned based on the UK's average FY22, FY23, FY24 and FY25 percentage of Global business travel, which ranged from 7% to 24% and averaged 17%. Legal entity data has been apportioned based on the entity's FY23, FY24 and FY25 percentage of UK business travel, which averages 3% over these years.

9. ECRW emissions are calculated at the country level and not available at the legal entity level. Emissions for this category have been apportioned based on the legal entity headcount as a percentage of UK headcount for each financial year.

DXC Technology (NYSE: DXC) is a leading enterprise technology and innovation partner delivering software, services, and solutions to global enterprises and public sector organizations — helping them harness AI to drive outcomes at a time of exponential change with speed. With deep expertise in Managed Infrastructure Services, Application Modernization, and Industry-Specific Software Solutions, DXC modernizes, secures, and operates some of the world's most complex technology estates.
