

Assure Cede

Ceded Reinsurance Administration

Built on shared platform investment across assumed and ceded reinsurance operations

110+

organizations globally

50+

countries

Why DXC?

Modernization at your own pace.

Incremental or full transformation: DXC unifies policy, claims and finance systems without wholesale replacement.

AI-powered capabilities. Supporting users with contextual insights, data summaries, automation, knowledge access and advisory throughout reinsurance operations.

Unparalleled expertise. We bring decades of large-scale, global data migration projects, and our specialists work across cultural and geographical boundaries to deliver value for our customers.

What if your reinsurance terms were a reflection of your data and processes, not your risk profile?

Ceded reinsurance is one of the most financially critical functions within an insurer, yet it remains one of the least modernized. **Multimillion-dollar reinsurance programs are still managed through spreadsheets, email chains and aging processes** not designed for today's scale or complexity.

Assure Cede is a purpose-built ceded reinsurance administration platform providing data quality and process control to reduce audit exposure, accelerate recoverables and negotiate from a position of strength.

Core capabilities

- End-to-end management of treaty and facultative business
- Individual and event claims automatically linked to ceded positions and recoveries
- Automatic calculation and distribution of claim recoveries
- Multilayer, multi-entity and multicurrency program support
- Structured data supporting global regulatory and reporting requirements
- Reduced reliance on manual hand-offs and spreadsheet reconciliation
- Flexible deployment supporting on-premises or SaaS requirements

Key benefits

- **A unified platform.** Fully integrated functionality providing end-to-end management across the reinsurance life cycle, ensuring a single source of truth.
- **All lines of business.** Unlike most competing platforms, Assure Cede handles both life and non-life ceded reinsurance within a single platform.
- **Deep configurability.** No-code configuration lets business users tailor the system directly without IT involvement.
- **Ecosystem integration.** Built on an open architecture allowing for integration with any platform.
- **Globally standardized solution.** 25+ years of innovation and continuous development, with every enhancement benefiting customers globally.
