

DXC Technology + Cisco MODERNIZING AT ENTERPRISE SCALE

Summary of DXC + Cisco Strengths

DXC Technology and Cisco unite six decades of mission-critical systems expertise with world-leading technology platforms to deliver secure, AI-enabled modernization. As a Cisco Preferred Partner in Networking, Security, and Services, DXC provides an end-to-end lifecycle—from initial assessment and design to 24x7 managed operations. This partnership is supported by **1,000+** certified and trained professionals on Cisco technologies worldwide. By integrating Cisco's validated architectures with DXC's industrialized managed services and AI-driven operational tooling, organizations can simplify global infrastructure, eliminate technical debt, and accelerate their transition to a zero-trust, cloud-centric future.

Networking Solution

Customer Challenge:

Organizations today are burdened by rigid, legacy network architectures that lack the visibility and agility required to support AI-driven digital infrastructure. This complexity often leads to unstable performance and skyrocketing operational costs as teams struggle to manage disparate global environments manually.

Outcome:

Global Connectivity Simplified via AI-Powered Managed Services Enterprises often struggle with unstable network performance and limited visibility across rigid, legacy environments that are difficult to manage and scale. DXC and Cisco modernize these infrastructures into software-defined architectures using unified analytics and automated operations.

80% Improvement in Visibility: A large international space research organization achieved an **80%** increase in end-to-end performance and visibility through SD-Access and SD-WAN technologies.

- Industrialized Scale: Support for **2,500+** devices and **150+** sites for a large Canadian bank, ensuring **97%** compliance and data accuracy.
- Optimized Performance: Achieved a **40%** increase in application performance for a prestige European car manufacturer by transitioning to centralized, cloud-integrated management platforms.

Security Solution

Customer Challenge:

Enterprises face a sophisticated threat landscape where traditional perimeter-based defenses are no longer sufficient to protect distributed users and sensitive mission data. Without a unified, identity-centric zero trust model, organizations remain vulnerable to lateral movement across complex, unsegmented environments.

Outcome:

Real-World Posture Transformation with Identity-Centric Zero Trust Enterprises require secure, high-compliance network infrastructures to protect mission-critical data in a landscape where traditional security zones are often complex and inconsistent. DXC integrates Cisco telemetry with its AIOps to deliver automated segmentation and unified policy enforcement.

- **95% Attack Path Reduction:** Integrated Cisco Security remediation helps eliminate exploitable paths identified through continuous validation.
- **50% Fewer Security Zones:** Streamlined mission security for aerospace leaders by modernizing legacy environments into segmented, zero trust architectures.
- **Regulatory Alignment:** Supports the **top 5** global banks with zero enforcement and hybrid-environment governance models that meet stringent banking regulations.

Services Solution

Customer Challenge:

Many enterprises struggle to accelerate their digital transformation because they are tethered to significant technical debt and lack the specialized global talent to manage 24x7 operations. This gap in operational expertise creates project delays and increases the risk of downtime during large-scale modernizations.

Outcome:

Accelerated Time-to-Value via Cisco Powered Managed Services Enterprises need to modernize rapidly but are often held back by technical debt and the complexity of managing disparate tools and vendors. DXC offers five specific Cisco Powered Services—including Catalyst SD-WAN, Meraki SD-WAN, and Cloud Calling—to provide cutting-edge industry standards at scale.

- **30% Operating Cost Reduction:** Centralized monitoring and AI-driven automation helped a space research organization slash operational costs significantly.
- **AI-Driven Managed Operations:** DXC's global delivery across **70+** countries is powered by **130,000** employees and AI-driven operational tooling for 24x7 resilience.
- **Mission-Critical Expertise:** DXC serves **6** of the top 10 aerospace and defense firms, ensuring high-compliance operations for the most sensitive environments.

Features and Benefits of DXC + Cisco Solutions

Together, we unify networking, security, identity, and analytics into a single integrated architecture designed for the AI era.

- **Global Governance:** Combines Cisco's world-leading technology with DXC's global delivery and AI-driven operational tooling to over 130 countries.
- **Industry-Specific Platforms:** Integrates financial services platforms like Coreignite and Hogan with Cisco SD-WAN and SSE.
- **Unified Analytics:** Consolidates tools by leveraging Cisco telemetry within DXC's AIOps for proactive IT resolution.
- **Optimized Supply Chain benefit:** Ensures global hardware availability.
- **Accelerated Transformation:** Uses validated Cisco architectures and DXC methodologies to simplify operations and reduce project risk.
