

TOTAL OPERATIONAL CONFIDENCE FOR MISSION-CRITICAL IT ESTATES

WHAT IT IS

A new operating model for Human + Agentic operations. DXC OASIS sits above your existing tools—connecting every system, every signal, and every decision across your entire IT estate. Governed, secure and built around human judgment. No rip and replace. Just everything you’ve already built, finally working as one.

WHAT CHANGES

- Alerts get resolved before they become incidents
- Engineers are freed up to proactively lead, rather than continuously reacting to alerts
- IT performance gets directly connected to tangible business outcomes
- Humans and agents work together as one cohesive team

WHY NOW

IT estates are increasingly complex, and the complexity doesn’t grow linearly. It compounds with the addition of every new system, integration and AI agent. Without a different approach, organizations risk losing oversight, slowing decisions and putting pressure on no-fail operations. DXC OASIS was built for the moment enterprises find themselves in today.

HOW IT WORKS

Orchestration is at the center of everything DXC OASIS does—all your existing systems can now be connected into a single operating platform. No disruption or replacement, just one layer that makes everything you’ve built finally work together. This layer enables:

Human + Agentic Workflows

Humans provide the judgment, oversight, and decision-making that cannot be automated, while agents continuously monitor, detect and act on everything that doesn’t require human-attention.

Unified Visibility

A complete picture of your entire estate, not a dashboard assembled after the fact.

Predictive Insights

Signals become actions before they become incidents and you become able to connect IT performance directly to business results.

ADDING VALUE ACROSS THE ENTERPRISE

ROLE / TITLE	THE DXC OASIS BENEFIT
CIO / CTO	From managing complexity to mastering it. Every system, signal, and decision across your entire estate is now connected in one unified view. Governed, secure, and built around human judgment.
VP of IT Ops	From chasing alerts to leading the operation. Agents react and act on everyday challenges, while your people are freed up to handle the leadership tasks that require their human judgment.
CFO	From defending your IT investments to proving their value. You now have verifiable proof that connects your technology spend to tangible business outcomes.
Business Lead	From IT as a “black box” to a source of business insight. Make more informed decisions, attain a competitive advantage, and drive measurable ROI.

WHY DXC

You can’t orchestrate what you don’t operate. DXC has spent sixty years running the world’s most complex, mission-critical IT estates. DXC OASIS was informed by hundreds of customer interviews, validated across millions of devices, and has been deployed and optimized inside our own operations first.

“Now that we can see DXC monitoring directly, we can reduce some of our own redundant checks, which saves us time and resources. Now we can quickly confirm if someone on the DXC side is already addressing it. That added visibility and transparency is a huge benefit.”

–DXC customer

YOU NO LONGER NEED 16 TABS TO DO THE JOB. CLOSE THEM, ONCE AND FOR ALL. AND CHANGE YOUR MISSION-CRITICAL OPERATIONS FOREVER.
