

DXC'S COMMITMENT TO THE PARIS AGREEMENT

In alignment with the goals of the Paris Agreement to limit global warming to well below 2 degrees Celsius — and preferably to 1.5 degrees Celsius — compared to pre-industrial levels, DXC has committed to set near-term company-wide emission reductions in line with the Science Based Targets initiative (SBTi). This commitment reaffirms DXC's efforts to make a positive and meaningful contribution to reduce the ongoing threat of climate change.

In addition, DXC has established a near-term target to reduce greenhouse gas emissions 55% by 2025 against its fiscal year 2019 baseline, noting that the SBTi has yet to approve the near-term target. DXC joins more than 2,000 global companies that have committed to set emissions reduction targets through the SBTi.

The SBTi is a collaboration between CDP, the United Nations Global Compact, World Resources Institute (WRI) and the World Wide Fund for Nature (WWF) and one of the We Mean Business Coalition commitments. The coalition enables businesses to set ambitious emission reduction targets to reduce emissions in line with the latest climate science. The SBTi defines and promotes best practice in science-based target setting, offers resources and guidance to reduce barriers to adoption, and independently assesses and approves companies' targets.

In addition to their SBTi commitment, DXC's overall global environmental sustainability targets align with the United Nations Sustainable Development Goals. DXC's targets include greenhouse gas emission reductions, energy consumption reduction, the use and purchase of renewable energies, freshwater conservation, the elimination of electronic waste in landfills, and the reduction of general waste. DXC also strives to support its customers on their own corporate responsibility and sustainability journeys.
