

DXC's Commitment to the Paris Agreement

In alignment with the goals of the Paris Agreement to limit global warming to well below 2 degrees Celsius — and preferably to 1.5 degrees Celsius — compared to pre-industrial levels, DXC has committed to achieve net-zero greenhouse gas emissions for our direct operations by 2050 expanding on our SBTi validated near-term targets to reduce Scope 1 and 2 emissions by 65% by FY30 against our FY19 baseline. This commitment reaffirms DXC's efforts to make a positive and meaningful contribution to reduce the ongoing threat of climate change.

The SBTi is a collaboration between CDP, the United Nations Global Compact, World Resources Institute (WRI) and the World Wide Fund for Nature (WWF) and one of the We Mean Business Coalition commitments. The coalition enables businesses to set ambitious emission reduction targets to reduce emissions in line with the latest climate science. The SBTi defines and promotes best practice in science-based target setting, offers resources and guidance to reduce barriers to adoption, and independently assesses and approves companies' targets.

In addition to our net-zero and our SBTi commitments, DXC's overall global environmental sustainability targets align with the United Nations Sustainable Development Goals. DXC's targets include greenhouse gas emission reductions, energy consumption reduction, the use and purchase of renewable energies, freshwater conservation, the elimination of electronic waste in landfills, and the reduction of general waste. DXC also strives to support its customers on their own corporate responsibility and sustainability journeys.
