

CUSTOMIZED APPLICATIONS WITH A LITTLE HELP FROM AI

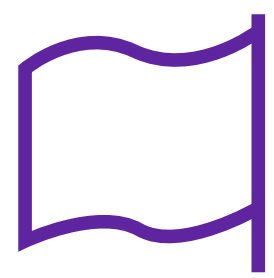

DXC Technology's GenAI Platform helps drive developer productivity and spins up custom tools, fast.

It takes time to build applications—particularly when you have to meet the specific needs and preferences of a wide range of users. With the DXC GenAI Platform, your developers can hit the accelerator, slashing the development cycle and building custom apps in just a few clicks.

Developers have a high workload and limited time to deliver custom applications. DXC's GenAI Platform gives them all the tools they need to quickly build and deploy applications on Java, with intelligent coding from a simple prompt. With the power of AI, we cut down the time it takes to create applications, so developers can create more and meet the needs of a modern business.

THE CHALLENGE

Imagine being able to take a specific request from an IT user, then create a custom application that addresses their challenge in just a few clicks.

We've heard from development teams across industries that they're dealing with ever-growing demand, alongside increasingly specific requests for novel IT capabilities. That's why we've built the DXC GenAI Platform for Custom Applications—to empower them to work faster and deliver applications that are more customized.

WHAT WE DID

Our solution makes it easy for developers to create accurate code from prompts to support application design, build and deployment.

This handy companion uses AI to redefine the 'Iron Triangle' of Project Management —scope, time and cost—for application projects. It takes just seconds for a developer to fully configure a project and fix a specified business problem using Java.

The DXC platform is fully integrated, flexible and modular. This means it's ready to write quick, clean and accurate code straight from the box—and it's simple to configure for your developers' working style. Data is protected with Secure Compass, which includes a catalogue of prompts to remedy a wide range of vulnerabilities.

HOW IT'S BETTER

The DXC platform transforms the way developers work, massively reducing the time they spend finding and fixing issues, writing code and solving user queries. It never tires or slows down, giving developers a reliable tool to quickly create and deploy services that make life easier for IT users.

Our platform is safe, simple and fully calibrated for the needs of a modern developer team, freeing them up to focus on the parts of the process that need their attention the most. They can bring modern, custom applications to market much faster—and with less manual effort.

“Our platform is safe, simple and fully calibrated for the needs of a modern developer team.”

INTERESTED IN WHAT WE DO?

At DXC, we partner with some of the world's largest and most recognized companies leveraging our industry experience. Our difference is in the doing with consultants, engineers and implementers who can solve the challenges, build the solutions and move companies forward like no one else can.

If you'd like to learn about how we can transform your organization, please email us at **partnerevents@dxc.com**

We look forward to speaking with you.
