

FOUNDATION TRANSFORMS ITS WORLDWIDE VISION USING CLOUD TECHNOLOGY

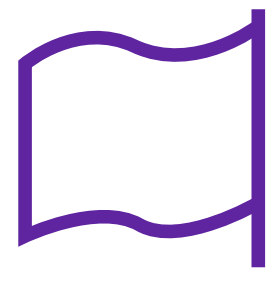

DXC Technology empowered cost-effective global eye care through cloud transformation.

Australia's Fred Hollows Foundation needed support for their rapidly growing global mission to provide high-quality, affordable eye care. DXC helped transform their IT infrastructure using cloud technology, enabling them to reach more people while managing costs.

The Fred Hollows Foundation partnered with DXC to move their IT systems to the cloud. The challenges they faced included global expansion and rising infrastructure costs.

DXC implemented an AWS cloud solution that improved performance and accessibility while reducing expenses. This transformation allowed the Foundation to focus more resources on their core mission—providing eye care worldwide, regardless of ability to pay.

THE CHALLENGE

The Fred Hollows Foundation has helped deliver over a million eye operations and treatments globally, training thousands of eye-care professionals. Their rapid growth and diverse global workforce demanded better IT solutions. Traditional on-premises systems were limiting their expansion, and investing in international networks would drain vital donation revenue.

They needed a solution that would work reliably in developing countries without excessive costs.

WHAT WE DID

DXC designed a comprehensive AWS cloud-migration strategy that addressed the Foundation's unique needs.

Over three months, we moved all business applications to a scalable virtual private cloud environment, implementing DXC Public Cloud managed services for AWS.

The new system includes enhanced security features and operating system support. This has created a flexible, pay-as-you-go model that makes data and resources available to staff worldwide, even in challenging environments.

HOW IT'S BETTER

The transformation delivered immediate benefits to the Foundation's global operations. Staff now enjoy improved system performance and 24/7 availability, while the organization made significant cost savings and can now scale their global operations more easily.

“We’ve successfully migrated all of our main on-premises business applications into AWS with minimal business impact, but noticeable gains in performance. We’re confident that this change will provide real benefits in terms of resilience, cost, performance and accessibility across our global organizations.”

Luke van Leeuwen

Director of Information and Management Technology,
Fred Hollows Foundation

INTERESTED IN WHAT WE DO?

At DXC, we partner with some of the world's largest and most recognized companies leveraging our industry experience. Our difference is in the doing with consultants, engineers and implementers who can solve the challenges, build the solutions and move companies forward like no one else can.

If you'd like to learn about how we can transform your organization, please email us at **partnerevents@dxc.com**

We look forward to speaking with you.
