Automation speeds up

Why it matters

By 2027, advancements in refactoring technologies will automate large portions

modernization

of the process. AI/ML will be used to make recommendations about how the legacy app should be decomposed, allowing developers to focus on more complex refactoring work.2

Companies that want to excel will have to make the transition from consumer to

brings revenue

Digital innovation

producer of digitally innovative products. Organizations that manage this transition will find digital offerings as an increasing part of the revenue stream.2

By 2023, more than half of a business' security budget will be allocated to cross-technology platforms such as XDR.

Agile innovation is coming

These platforms bring several individual cybersecurity tools into one dashboard where use cases can be correlated and remediated.2

Adoption of emerging technologies will increase post-pandemic. Improving and maintaining IT infrastructure security
