FUTURE-PROOFING YOUR BUSINESS THROUGH VIRTUALIZATION:
A strategy for successful hypervisor deployment

As businesses seek new ways to modernize and scale, many are reassessing their hypervisor and server virtualization strategies. However, the evolving landscape presents challenges, including rising costs, vendor lock-in and inadequate governance.

With the market shifting toward alternative solutions, and amid a growing demand for more flexible and cost-efficient options, businesses face the challenge of maintaining operational efficiency while managing associated risks.

How can you make informed decisions that support both your current and upcoming virtualization requirements?

There's a balance to strike: To meet the demands of a modern enterprise, comprehensive virtualization solutions need to not only adapt to growth and complexity but also minimize risk, disruption and optimize performance.

Getting this balance right requires an efficient, scalable solution capable of supporting your ever-evolving workloads and infrastructure needs in a future-proof and secure manner.

However, your organization may currently be held back by obstacles like these:

- Vendor lock-in and limited flexibility
- Escalating licensing costs
- Migration and integration complexity
- Inadequate governance and security risks
- Lack of standardization and unified strategy
- Technical debt and legacy systems

Virtualization services made for the modern enterprise

DXC Technology's Virtualization Advisory Services meet the demands of modern enterprises, providing scalability, reducing risk, and ensuring businesses are future-proofed for growth.

Working with Dell Technologies and the key hypervisor providers, DXC provides a framework for assessing, planning and executing hypervisor optimization or migration to new platforms.

Leveraging our experience with 2,000-plus successful migrations, DXC provides tailored recommendations that align with your budget and objectives. Our partnership with Dell further enhances the ability to offer reliable solutions and support, allowing you to optimize your hypervisor environment with minimal disruption.

With DXC and Dell's combined expertise, your digital transformation initiative can move forward unhindered by operational complexity or legacy systems. So you can focus on driving business growth and innovation.

A scalable, secure, streamlined approach with DXC and Dell

Together, DXC and Dell simplify hypervisor optimization, migration and virtual infrastructure management, providing a streamlined approach that reduces cost, time and complexity. You can expect these benefits:

- Enhanced scalability to accommodate evolving workloads
- Streamlined migration with minimal disruption
- Improved data security and compliance
- Optimized performance for virtual environments
- Future-proofing for long-term business growth

Our solution is built on Dell's industry-leading hardware, including PowerEdge servers and PowerFlex hyperconverged infrastructure, and a variety of virtualization technologies. The solution delivers high performance along with reliable and efficient virtualization.

Through advanced automation and AI-driven management tools, we enable businesses to quickly optimize their current environment or seamlessly migrate to modern hypervisors, minimizing downtime and ensuring a smooth transition.

DXC and Dell: A future-proof partnership

As a Titanium Black Partner with a long history of coinvestment and co-development, DXC has early access to Dell's technology roadmap. This allows DXC to continuously evolve solutions so they remain at the forefront of AI and data management.

Together, we help customers drive growth by dramatically improving their ability to anticipate and respond to change. We work with your team to develop powerful transformational strategies, apply industry-recognized innovations and manage foundational technologies.

20+ years of strategic partnership
