“Our IT team wants to be the cutting-edge group that accelerates business value for our company by making it easy for customers to work with DXC. Microsoft is one of our primary partners in making that vision a reality.”

—Michael Baker, Vice President and IT Chief Information Security Officer, DXC Technology

Challenge: DXC Technology runs business-critical systems for its global customers. It needed a scalable toolset to deliver its services across a wide internal spectrum of infrastructures, compliance requirements, and technologies.

Solution: The company rolled out Microsoft 365 Defender and other Microsoft Defender products—all part of its Microsoft 365 E5 license. It uses Intune to manage devices for 130,000 employees and oversees security with Microsoft Sentinel.

Impact: DXC added ease of use on top of functionality. Most of all, it helps defend its priceless IP while also modelling optimized security practices and tools for its many global customers.

Products: Microsoft 365 Defender, Microsoft Defender for Cloud Apps, Microsoft Defender for Endpoint, Microsoft Defender for Identity, Microsoft Intune, Microsoft Entra ID, Microsoft Purview Compliance Manager, Microsoft Purview Insider Risk Management, Microsoft Sentinel
